SUMMARY

Computer Science Engineering student specializing in IoT and Cyber Security with Blockchain Technology, maintaining a strong academic record (CGPA: 7.8). Skilled in SQL, embedded systems, and full-stack development, with hands-on project experience including an IoT-based crash detection system and a real-time radar prototype. Active competitive programmer on LeetCode and HackerRank, seeking opportunities in software development and data analysis.

PROJECTS

1. IoT-Based Smart Vehicle Crash Detection & Emergency Response

Stack: IoT, GPS, Embedded Systems

Built a real-time crash detection system monitoring vehicle location, impact force, and speed using IoT sensors. Automated SOS alerts with live GPS coordinates and victim health details, and designed offline data logging for low-network environments.

2. Radar System Using Arduino

Stack: Arduino, Ultrasonic Sensor, Servo Motor, IoT

Built a radar prototype using Arduino and a servo motor for real-time object detection and distance measurement with live visualization, applied to proximity monitoring, automation, and security use cases.

3. End-to-End SQL Data Analysis Portfolio

Stack: PostgreSQL, SQL, Data Analysis

Analyzed multi-table datasets (books, customers, orders) using data cleaning, joins, and aggregations, and wrote business-reporting queries to extract actionable insights from relational data.

4. AI Chat bot

Stack: JavaScript, node.js

Built a real-time interactive chatbot runs by voice command used for multitasking purpose to help in a much faster way

SKILLS

Languages: SQL, JavaScript, React, python

Full Stack: Front-end and back-end development fundamentals

EDUCATION

Bachelor of Engineering (B.E.) – Computer Science 2022–2026

East Point College of Engineering and Technology, Bengaluru, Karnataka. CGPA: 7.8

CERTIFICATIONS

- Data Analysis – Completed a course focused on data analysis techniques and tools
- App Development Using Generative AI

KEY ACHIEVEMENTS

- Successfully built and implemented multiple IoT-based projects, strengthening real-time data processing and analysis skills
